ECOWAYZ TECHNOLOGY SYSTEMS OVERVIEW

Ecowayz International, LLC (Ecowayz) provides multiple systems that are sustainable, energy efficient, ecologically friendly and cost effective. The technologies Ecowayz has to offer with it's consortium range from Construction materials and methods to virtual renderings, energy, water generation and filtration to agricultural and industrial manufacturing.

A brief outline of some of the technologies the Ecowayz consortium has to offer is as follows;

Construction materials and methods - Structural Insulated Panels (SIPS) are utilized where applicable. The integration of technologies into conventional methods are also utilized.

Virtual Rendering - Interactive virtual renderings of housing developments, master plans, industrial seaports, airports and other infrastructure projects that allow the end user to interact and have a thorough understanding of the end results.

Energy - Solar, Wind, Waste to Energy and Biomass to synthetic fuel creation systems.

Water Generation and Filtration - Atmospheric Water Generation, both miniaturized Mobile Solar Powered and Large Industrial water filtration and desalination systems designed to meet the specific needs for the specific assessed regions current and projected demands.

Agriculture - Aeroponic and Hydroponic farming techniques are utilized for vegetables, fish and algae utilized for many sectors of global usage.

More specific descriptions of each of these technologies is provided individually in separate synopsis forms and presentations.
